Conclusion:

Implementing a Persistence App that connects to user's phone and cloud, creating an app that allows the user to save the data, show the data and clear multiple data points from cloud while allowing the user to use Dark Mode Toggle.

using a Jetpack Compose allow for a modern user interface havign a real-time data synchronizaton and dynamic Dark Mode.

Takeaway:

Firestore: Local sotrage is useful for small settings while Firestore manage the list of data

Management: use of remember and mutableStateOf in Jetpack Compose for UI and list.
